# Node.js Events

[Christopher Roach](#) on Mar 21st 2013 with [30 Comments](#)

## Tutorial Details

- 
- **Difficulty:** Intermediate
- **Completion Time:** 25 Minutes

*This entry is part 5 of 5 in the [Node.js: Step by Step](#) Session – [Show All](#)*

[« Previous](#)

In this lesson, we get back into the development of our blog application after spending the last two episodes looking into some of the tools that have sprung up around the node community. Today we'll be adding the code to process our New Post form. In addition to this, we'll be learning all about Events: the secret sauce behind Node's success.

### By **Christopher Roach**

I am a software engineer with Apple. I have worked as a web developer in the Window's world in the past during grad school and an embedded developer before joining Apple where, for the last two and a half years I've been a web developer on the online store and just recently switched over to iPhone development.

**Note:** Want to add some source code? Type `<pre><code>` before it and `</code></pre>` after it. [Find out more](#)
